

Lliam Symonds

Software Engineer

Brisbane, Australia · lliamsymonds04@gmail.com · linkedin.com/in/lliam-symonds · github.com/lliamsymonds04

Computer Science graduate from the University of Queensland (2025) with a major in Machine Learning. Experienced in fullstack development and AI/ML engineering through various roles. Strong background in building intelligent systems, from AI orchestrators for insurance claims processing to content management systems with AI-powered onboarding. Passionate about leveraging machine learning and modern web technologies to solve real-world problems.

WORK EXPERIENCE

Software Engineer — Suncorp

Jan 2026 – Present

Full-time · Brisbane (Hybrid)

- Built an AI orchestrator that automates post-lodgement claim assessment in production — new claim assessment, makesafe dispatch and builder allocation — running across the entire open book of ~200 housing claims.
- Cut the median claim assessment from multiple days to about five minutes by removing the queueing and hand-off delays that previously parked claims awaiting an assessor, then awaiting allocation.
- Delivered LLM-backed claim summarisation and review that passed Suncorp's risk and compliance review — the gate that stops most LLM work in a regulated insurer from shipping.

Software Engineering Intern — Tanda

Dec 2025 – Jan 2026

Fixed-term internship · Brisbane

- Delivered a content management library letting employers assign training to their staff, with AI generating onboarding documents.
- Shipped in Ruby on Rails on a small team against a deliberately short delivery window.
- Worked against a production PostgreSQL database holding customer data across three regions — Australia, the US and Europe.

EDUCATION

Bachelor of Computer Science — University of Queensland

2023 – 2025

Major in Machine Learning · Brisbane

- Capstone: Trailrunners — a trail runner tracking application processing LiDAR and GPS data, built by a team of six in Agile for UQ Health.

TECHNICAL SKILLS

Languages: Python, TypeScript, C#, Ruby, SQL, HTML, CSS

Frameworks & Libraries: React, .NET, Ruby on Rails, Svelte, Next.js, Flask, FastAPI, Express, Node.js, Tailwind

Machine Learning & AI: PyTorch, Pandas, NumPy, LangChain, OpenCV, Mediapipe, Semantic Kernel, LLMs

Databases: PostgreSQL, SQL Server, Redis

Cloud & DevOps: AWS, Azure, Docker, Git

Tools & Platforms: UiPath, Linux, Vim, RESTful APIs

Specialized: Computer Vision, Reinforcement Learning, Natural Language Processing, Signal Processing

KEY PROJECTS

Customer Support Bot

- Agentic chatbot that automatically logs forms based on user requests. Built with C#/.NET 9 and Semantic Kernel for AI agent management, SignalR for real-time communication, hosted on AWS Elastic Beanstalk with

PostgreSQL and Redis.

Brisbane Public Transport App

- Fullstack application using an Express/Node.js backend and Svelte frontend, integrating the Translink API for real-time transport information and the Google Routes API for directions.

Inventory Management System

- Fullstack application with a C#/.NET 9 backend and React/Next.js frontend. Hosted on Azure with SQL Server. Features item management, stock levels and stock logs.

Walker AI

- 2D bipedal walker using a NEAT genetic algorithm written from scratch in TypeScript. Uses Matter.js for physics and PixiJS for rendering, trained in the browser.

Unemployment Rate Predictor

- LSTM neural network predicting Australian unemployment rates using PyTorch. Backend with Flask, deployed on Google Cloud Run.
